### **DETAILED ACTION**

#### ***Priority***

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

#### ***Specification***

2. The disclosure is objected to because of the following informalities: on page 14, line 17 has been typed over. On page 17, line 5, and page 21, line 20, applicant should clarify the designations "0 163c . ranged" and "magnetm / etic . rce," respectively.

Appropriate correction is required.

#### ***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 5, line 9, it is not clear what applicant intends by "star-dm / -del('..")

#### ***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2832

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Plumeret et al.

[US 5,289,46] in view of Gschlössl [US 4,994,725].

Plumeret et al. discloses a contactor apparatus for an electric motor [figure 9] comprising:

- a body [figure 2];
- at least three power terminals [22-24] connected to three-phase power lines [R, S and T]

and insulated from one another;

- at least three main starting terminals [15-17] respectively connected to terminals of a three-phase motor [M];

- at least three star-delta terminals [25-27] connected to the three-phase motor;

- an electromagnet for a main circuit [7];

- an electromagnet for the star-delta terminals [6]; and

- main and star-delta circuit switching units [figure 3].

Plumeret et al. disclose the instant claimed invention except for: the specific arrangement of the terminals on the body.

Gschlössl discloses a drive arrangement having motor terminals mounted on an opposite end of the body than the power terminals.

Art Unit: 2832

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the mounting arrangement of Gschlössl for the terminals of Plumeret et al. for the purpose of improving isolation.

Regarding claim 2, the provision of a timer would have been an obvious design consideration in order to provide a timed operation.

Regarding claim 3, Plumeret et al. disclose the switch sections being isolated [figure 1].

Regarding claims 4-5, the specific operation sequence of the switching would have been an obvious design consideration based on the intended motor functions.

Regarding claim 6, Plumeret et al. discloses the switches being spring biased.

Regarding claim 7, the provision of an arc extinquishment means would have been obvious in order to prevent damage to the switching assembly from arc gases.
